

GENESIS G90 SUMMIT NEXT CONCEPT

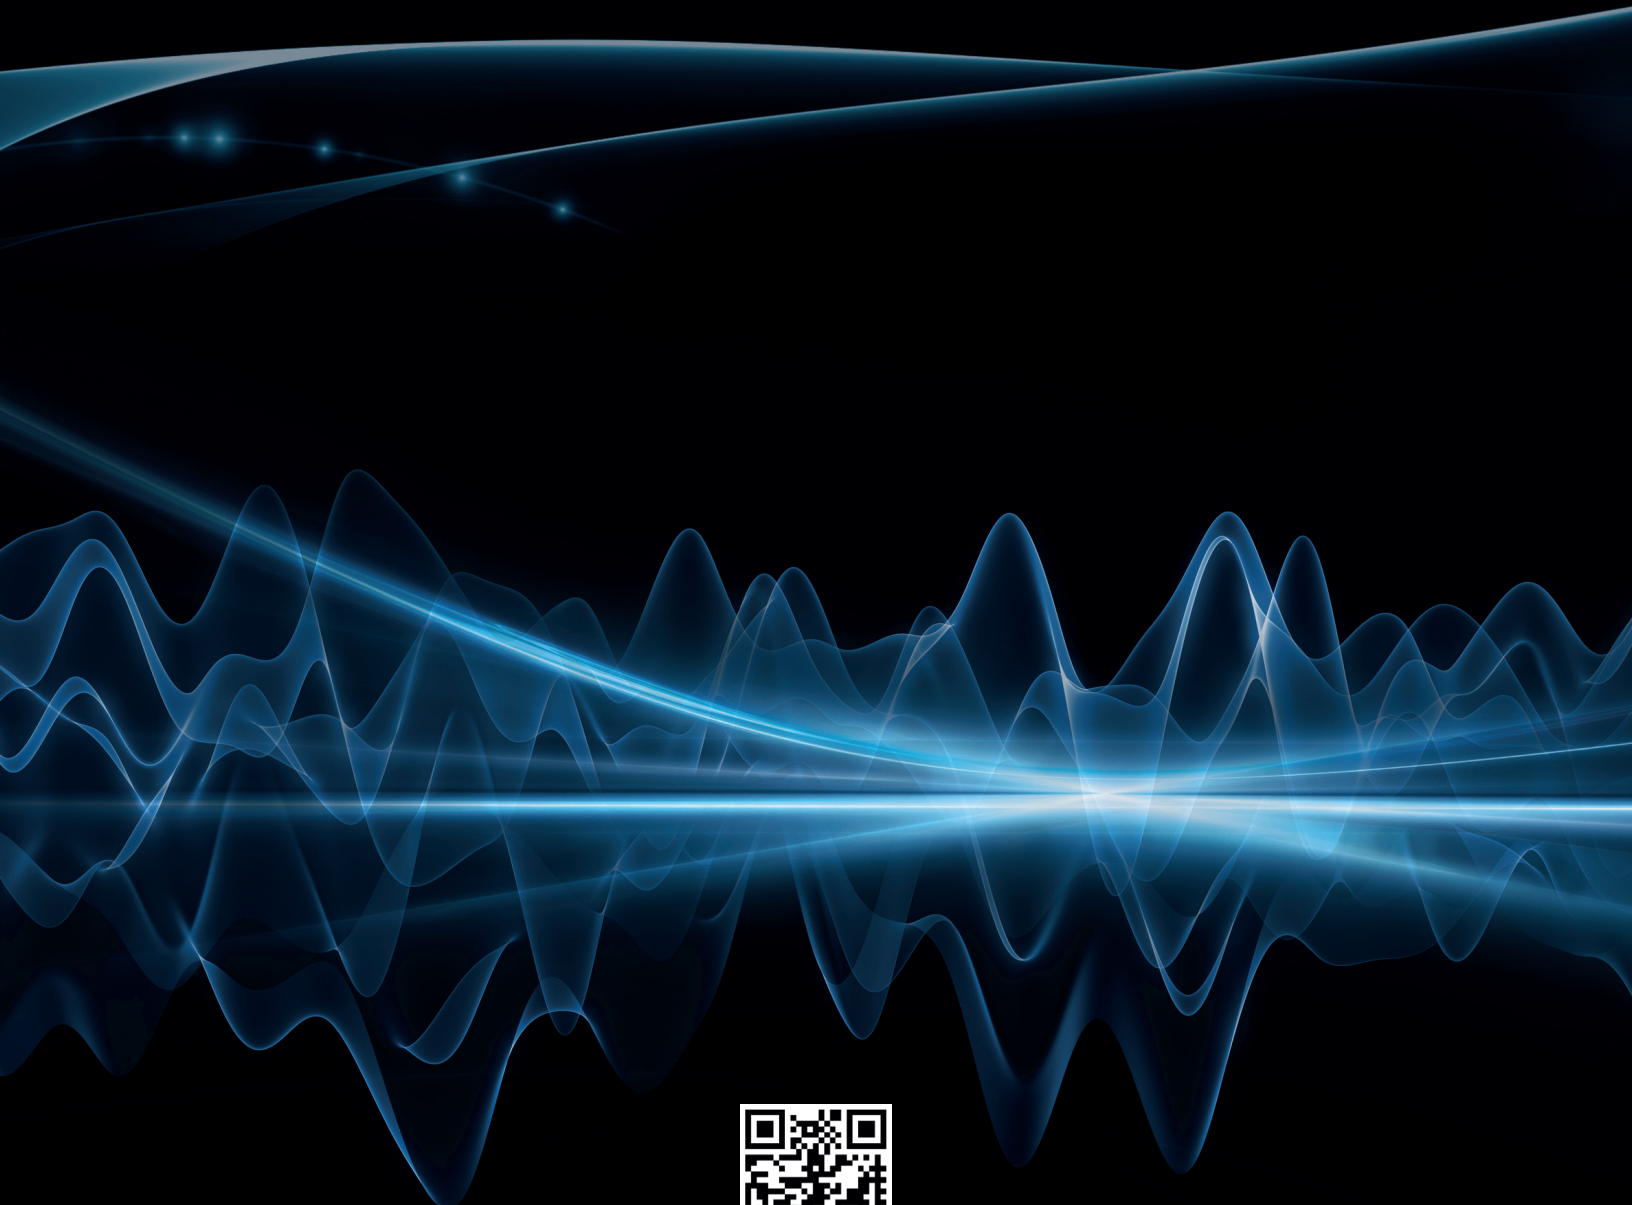

BENEFITS

- HARMAN SUMMIT Next provides luxury and ultra-luxury in-car experiences that can include 40+ individual channels of amplification and equalization, while delivering a wide range of surround sound solutions based on HARMAN's powerful and proprietary DSP (Digital Signal Processing).
- With HARMAN Dynamic Sound Stage the music quite literally connects to the drive by controlling the in-car soundstage to match the route – responding to bends in the road, acceleration and deceleration. The result is a more dynamic listening experience, that is as varied as the journey itself.
- HARMAN Ambisonics Escape™ technology recreates the 360-degree sound field of your personal sanctuary. From whispering trees to crashing waves or the sounds of the wildlife – Ambisonics Escape comes with a wide selection of relaxing surroundings.
- The latest hi-res streaming capabilities are enabled by amplifier-based Wi-Fi connectivity. Not only can passengers personalize their ride with their media entertainment of choice, but they can also use the broadband connection to join virtual video conferences.
